

They say you can't improve upon perfection. Well, they obviously haven't seen the **D5-Evo**.

One of the most durable and reliable motors ever made, the legendary D5 is renowned the world over. Many years later, old 'tried and tested' gets perfected. We borrowed what we learned from the D10 and applied it to the **D5-Evo**.

Incorporating a 12V version of the D10 controller, the **D5-Evo** also offers a wide range of useful features, which includes ChronoGuard timer functionality (a world first).

Faster, smarter and easier to set up, old faithful even got a facelift and now looks more like his D10 cousin.

Hard as nails and loyal to the end, you can sleep easy, knowing that our **D5-Evo** is on guard.

You can even enjoy the amazing features and functionality of our flagship motor if you don't have mains power at your gate - thanks to the **D5-Evo Low-Voltage**. Simply connect a transformer to this cost-effective model's included rectifier, and enjoy the freedom of fully DIY gate automation! No expensive high-voltage cable runs, no costly isolators, no sweat!

Main Features

Battery backup

We pioneered power failure protection in gate motors. So in line with all our other motors, the **D5-Evo** carries on guarding your entrance even when the lights go out.

All-important speed

The original D5 made a mark for itself being a quick motor, opening the gate swiftly when you arrive at your entrance. The **D5-Evo** is now that little bit faster, opening your average four metre gate in less than twelve seconds, adding even more security and convenience.

Open it the way you like it...

Rapid opening but a more tempered closing just in case a loved one is in the way, that's the sort of sophistication in motor control you can expect from the **D5-Evo**. Added to this, you can vary the acceleration and deceleration of your gate and make it move so smoothly it will do so for many years to come.

Pushes like a mule

Such a compact package but such a potent push force, it will reliably move almost any gate weighing up to 500kg and do it for a very long time.

Wide awake all the time!

Incorporating the tried and tested DOSS position control system of its predecessors, the D3 and D5, the **D5-Evo** moves open and closed accurately, stopping in just the right spot each and every time. It's also wide awake to any obstruction that might cross its path, ensuring safe and sensitive anti-crushing protection.

It will turn heads

The **D5-Evo** takes on a new and more attractive look compared to the original D5. It's nice to know that even your trusty gate guard will turn heads.

Plug and play

The LCD-based controller makes child's play of setting up the gate. It is literally plug and play - the **D5-Evo's** controller does all the thinking for you.

It's got it all

What a pleasure to click through an almost endless list of really useful features - from multiple Modes of Operation, gate operating parameters, Pillar Light control with Pre-flash, Alarm functions, Positive Close Mode and Real Time Clock and Calendar to enable time-based features - to helpful diagnostic feedback. It just stops short of making the coffee!

Forever yours

We know that this compact companion will serve you well - year, after year, after year. So just like all other CENTURION products, your beautiful **D5-Evo** motor also comes with an industry-leading 24 month warranty for added peace of mind.

Alarm features (a world first) ¹

Burglars have some nifty techniques to get into your home. Fortunately, criminals can't outsmart the **D5-Evo**. An **Ambush Alarm** will alert your security company if the opening or closing beams are interrupted for a predefined, but adjustable, time. Similarly, a **Break-in Alarm** will go off if the closing beam outside your house is interrupted. Their gig is up.

1. Requires Infrared Safety Beams to be installed

Operate wirelessly, thanks to CENTURION 2

Besides its code-hopping technology offering the highest level remote control security, this multichannel and multi-user CENTURION onboard receiver allows for a multi-button remote to operate any combination of the system inputs, such as Gate trigger, Pedestrian Opening, Holiday Lockout, etc.

It stores up to 500 transmitter buttons, and amongst other access control features, it provides the ability to selectively add and delete transmitter buttons saved into its memory.

2. CENTURION code-hopping technology

D5-Evo Controller Features

Hardware Features

- Fully-sealed plastic housing for controller to prevent ingress of dirt and insects
- Easy setup of controller using LCD user interface
- Removable connectors on controller for easy maintenance
- Watchdog IC ensures full and safe operation of controller
- Optional Backup Memory Module allows backing up of all the information that has been set up in the system
- **D5-Evo Low-Voltage** includes an electronic rectifier - making it the ideal cost-effective solution for sites with no mains power at the gate

Electronic Features

- Opening and Closing Safety Beam/Photocell inputs with beam circuit functional test ³
- High-security cleared-beam Autoclose in conjunction with safety beam (PIRAC) ³
- Break-in and Ambush Alarm (a world first) with configurable outputs via onboard buzzer, Pillar Light Relay, etc. ³
- Multiple Modes of Operation: Standard Mode, Condominium Mode (multi-user), Reversing Mode, PLC ⁴ and Deadman Control Mode ⁵
- Automatic closing with adjustable time, pushbutton override and selectable according to gate position
- Remote Gate Status Indicator (gate position, power failure, low battery, multiple collision detection and Pillar Light status indication) ⁶
- Pedestrian Opening (adjustable opening and Autoclose time) ⁷
- Free-exit facility ⁸
- Holiday Lockout ⁷ - configurable as Emergency Stop ⁹
- Courtesy/Pillar Light Timer with adjustable time ¹⁰
- Fully configurable pre-delays with multi-modal Pre-flash ¹⁰
- Multiple Operating Profiles to suit region of installation - select between ZA, CE, etc.
- Full configuration of gate operating parameters, including independent gate opening and closing speeds, ramp-up and ramp-down distances and crawl speed
- Positive Close Mode (e.g. ensure activation of electric fence contact switch)
- Onboard multichannel CENTURION code-hopping receiver with the ability to:
 - learn transmitter buttons to specific functions (e.g. Gate trigger, Pedestrian Opening, Free-exit, Pillar Light Control, Holiday Lockout)
 - selectively delete specific transmitters that have been lost or stolen
 - automatically learn transmitters into the system (Autolearn)
 - automatically delete transmitters that are no longer in use (Delete-Not-Present)
- Integrated **ChronoGuard** (a world first) with Real Time Clock and Calendar timer offering multichannel time-activated and time-barring functionality
- Auxiliary output can be configured via the **ChronoGuard** timer to provide timer functionality to external devices, such as security lights, entrance fountain, etc.

3. Infrared Safety Beams or detection device must be fitted

4. PLC: separate inputs to open, close and stop the gate

5. Deadman Control Mode: separate inputs to open and close the gate, that must be held active to move the gate

6. Remote LED must be fitted

7. Onboard receiver must be used or external access control device such as keypad or keyswitch must be fitted

8. Infrared Safety Beams or Inductive Loop Detector must be fitted

9. To use this feature, a normally-closed emergency stop pushbutton must be fitted

10. Pre-flash security/Pillar Lights must be fitted
